

**MATTRESS AND BED ASSEMBLY
PROVIDING AN ENLARGED SLEEPING SURFACE AREA**

ABSTRACT OF THE DISCLOSURE

5 A bed assembly provides an enlarged sleeping surface area as compared to a standard Queen sized bed. Specifically, in the disclosed bed assemblies, the sleeping surface area is about 64 inches to about 68 inches wide and about 77 inches to about 82 inches long. This can be accomplished by providing both a mattress and a foundation having the appropriate, 10 enlarged sleeping surface area, or by combining an enlarged mattress with a foundation having at least one standard Queen sized surface. The mattress and foundation can be fit into a bed frame made of a suitable size to fit the bottom surface of the foundation (*i.e.*, either "enlarged" or standard Queen size). The enlarged sleeping surface of the bed may be between about 65 inches to about 67 inches wide and about 78 inches to about 80 inches 15 long. This enlarged sleeping surface area provides a more comfortable and restful sleep for two occupants.
